

SPICESTRONG

Marketing User Guide

A screen-by-screen walkthrough of the SpiceStrong iOS app — with the promotional hooks, content angles, and screenshot picks your social media marketer needs to start producing on day one.

Tagline	Guided High-Protein Cooking
Primary audience	Home cooks chasing a fitness goal — fat loss, muscle gain, keto, recomp
Voice	Premium, confident, chef-meets-coach. Dark editorial; copper-and-cream
Differentiators	AI recipe generator (Claude) · DALL-E 3 step photography · ElevenLabs voice narration · Scan-your-
Platform	iOS (live in App Store) · Android (in development)
Brand colors	Ink #0F0F0F · Copper #8F3A1F · Spice #E85D26 · Cream #F8F1E8

How to use this guide

Each screen below has four sections: **Purpose** (what the screen does and why it exists), **Key elements** (the components a marketer should reference), **Marketing angles** (content hooks, post ideas, and which screens make strong App Store screenshots), and a category that groups related screens.

Read the **Entry & Onboarding** section first — those three screens carry most of the first-touch marketing weight. **Cooking Experience** and **AI Recipe Creation** are the two most distinctive flows; lead with them for video content. **Scan & AI Vision** is the highest virality bet.

Contents

ENTRY & ONBOARDING

01. Splash Screen
- The 3-second first impression
02. Protein Selection Screen
- The 'pick your protein' grid that defines the app

RECIPE DISCOVERY

03. Recipe List Screen
- The 'menu' for the chosen protein
04. Recipe Filter Screen
- Where fitness goals become a recipe shortlist

05. Recipe Overview Screen	<i>The 'should I cook this?' page</i>
COOKING EXPERIENCE	
06. Cooking Start Screen	<i>The 'ready, set, cook' moment</i>
07. Ingredient Checklist Screen	<i>Smart shopping list + Amazon Fresh integration</i>
08. Cooking Mode Screen	<i>The flagship screen — chef-guided, voice-narrated cooking</i>
09. Feedback Screen	<i>Post-cook 5-question feedback loop</i>
AI RECIPE CREATION	
10. AI Recipe Builder (SpiceBuilder) Screen	<i>Claude-powered recipe generator — the differentiator</i>
11. AI Recipe Result Screen	<i>Where AI recipes feel like magazine spreads</i>
12. Add Recipe Screen	<i>5-step wizard for cooks who want to upload their own</i>
13. Custom Recipe Screen	<i>Quick manual recipe entry</i>
SCAN & AI VISION	
14. Scan My Grocery (Fridge) Screen	<i>Photograph your fridge → get recipe ideas</i>

25. Dietary Restrictions Screen	<i>One toggle changes every recipe shown</i>
NAVIGATION	
26. Profile Drawer (Slide-out Menu)	<i>The 'everything' menu</i>

ENTRY & ONBOARDING

SCREEN 01

Splash Screen

The 3-second first impression

Purpose

Branded cover screen with a dark cinematic spice background, the SpiceStrong wordmark, the eyebrow tagline **Guided High-Protein Cooking**, and a single copper-glow **Get Started** button. Tapping anywhere advances the user into the app.

Key elements

- Hero image: smoky, restaurant-style food photography
- Wordmark: SpiceStrong in oversized serif (Playfair-style)
- Subtitle: "Build powerful meals with bold flavor, clean macros, and chef-guided steps."
- CTA: Gradient orange Get Started pill

Marketing angles

- Use as your **App Store hero shot** and Reels/TikTok cover frame — the type lockup reads instantly at thumbnail size.
- Headline hook: *"Build powerful meals with bold flavor and clean macros."* — strong for paid social and a Day 1 launch post.
- Content angle: "Why I started SpiceStrong" founder reel — open on splash, cut to dish, voiceover.

SCREEN 02

Protein Selection Screen

The 'pick your protein' grid that defines the app

Purpose

The home/landing screen after onboarding. A 2-column scrollable grid of 14 proteins (Chicken, Beef, Lamb, Goat, Pork, Fish, Prawns, Eggs, Paneer, Tofu, Soy, Beans, Dairy, Protein Powder) with custom photography per tile. Tabs at the top filter **All / Non-Veg / Vegetarian**. A search bar lets users jump directly to a protein. A profile icon in the corner opens the slide-out drawer with every feature.

Key elements

- 14 protein cards with hand-shot photography
- Top filter pills: All · Non-Veg · Vegetarian
- Search bar: "Search proteins..."
- Profile drawer entry point

Marketing angles

- This is the screen **most worth screenshotting** — it visually communicates the entire app's premise in one image: "start with protein, get a meal."
- Reel angle: "*14 proteins, infinite high-protein meals — pick one.*" Animate the grid scrolling.
- Inclusivity hook: vegetarians and vegans get a dedicated filter — call this out to broaden audience.
- App Store screenshot #1 candidate.

RECIPE DISCOVERY

SCREEN 03

Recipe List Screen

The 'menu' for the chosen protein

Purpose

Once a protein is picked, this screen shows a curated feed of recipes for it. Each recipe appears as a premium card with hero image, name, cook time, difficulty, macro stats (protein/calories), favorite heart, cook count, and community star rating. A **Build with SpiceBuilder** CTA at the top opens the AI recipe generator. Filter button opens the full filter panel; pantry button shows recipes you can make right now.

Key elements

- Hero image recipe cards (Supabase-hosted or AI-generated)
- Macro chips on each card: protein g, calories, time
- Favorite (heart) and community rating
- "Build with SpiceBuilder" CTA — AI recipe generator entry
- Filter + pantry-match toggle

Marketing angles

- Best screen for **before/after carousel posts**: "Here's the chicken menu inside SpiceStrong."
- Hook: "Every recipe has 30g+ protein. No guesswork."
- Demonstrate variety — scroll the list slowly in a Reel, freeze on 4–5 dish names.

SCREEN 04

Recipe Filter Screen

Where fitness goals become a recipe shortlist

Purpose

A two-tab filter sheet that turns user goals into recipe matches. **Quick Build** tab: pick a fitness goal (Fat Loss, Muscle Gain, Balanced, Keto, High Energy) and macros auto-fill — also spice level, cooking time, difficulty, and meat type. **Advanced** tab: cooking method, cuisine, calorie range, meal-prep style.

Key elements

- Fitness Goals: Fat Loss ■ · Muscle Gain ■ · Balanced ■■ · Keto ■ · High Energy ■
- Macros (per serving): protein, carbs, fat ranges
- Spice Level: Mild → Extra Hot ■
- Cooking Time, Difficulty, Cooking Method, Cuisine, Calorie Range

Marketing angles

- Strongest screen for the **fitness audience**. Hook: "Tell us your goal — we'll plate the macros."
- Content angle: short video showing a user tap "Muscle Gain" and watch the macros auto-fill — feels magic.
- Cross-post to /r/loseit, /r/gainit, /r/keto — each crowd sees their own ideal filter.

SCREEN 05

Recipe Overview Screen

The 'should I cook this?' page

Purpose

Tapping a recipe card opens a clean overview: large hero image, recipe name, total time, difficulty badge, full ingredient list (with quantities for the selected serving tier), and completion stats (calories, protein per serving). Buttons: **Back** and **Start Cooking**.

Key elements

- Hero image (Supabase → AI-generated → built-in fallback chain)
- Quantity tier toggle: 2–3 servings / 4–6 servings
- Full ingredient list
- Macro summary
- Start Cooking button

Marketing angles

- Use the high-res hero image as the **dish-of-the-day Instagram post**.
- Hook: "Open recipe → see exactly what 38g of protein looks like."
- Pair with carousel: slide 1 = overview screen, slide 2 = cooking mode, slide 3 = finished dish.

COOKING EXPERIENCE

SCREEN 06

Cooking Start Screen

The 'ready, set, cook' moment

Purpose

Pre-cooking countdown screen with a pulsing CTA. Shows total cook time, difficulty, and lets users review or share the ingredient list before they tap **Start Cooking** (which moves to live cooking mode). Auto-loads any items already in the global shopping cart.

Key elements

- Pulsing Start Cooking button
- Cook-time and difficulty summary
- Share recipe action
- Amazon Fresh shopping cart preview

Marketing angles

- Great **countdown / anticipation** moment for video content.
- Reel script: "Apron on. Phone on the counter. Tap Start." Cut to cooking mode.

SCREEN 07

Ingredient Checklist Screen

Smart shopping list + Amazon Fresh integration

Purpose

A categorized checklist of every ingredient you need (Proteins, Veg, Dairy, Spices, Pantry, etc.) with emoji icons. Users can tap items off as they pack the kitchen. Subtracts items already in the user's pantry, builds a smart shareable list, and offers **Open in Amazon Fresh** for one-tap shopping.

Key elements

- Category sections with emoji headers
- Tap-to-check ingredients
- Pantry-aware: "You already have this" auto-removal
- Share list + Open in Amazon Fresh CTAs

Marketing angles

- Huge **convenience hook**: "From recipe to Amazon Fresh in one tap."
- Audience angle: busy professionals, parents — show the time-saved math.
- Demo screen for any "day in the life" creator content.

SCREEN 08

Cooking Mode Screen

The flagship screen — chef-guided, voice-narrated cooking

Purpose

The signature SpiceStrong experience. One step at a time with a large step image, instructions, the ingredients used in *that* step (with photos), a chef's tip, and an integrated countdown timer. ElevenLabs TTS narrates each step out loud so users can cook hands-free. Step-by-step photos auto-load (AI-generated via DALL-E 3 when not manually shot). After the last step, users get a shareable recipe card, a rating prompt, and a feedback path.

Key elements

- Large step image + ingredient thumbnails
- Step title, full instructions, chef tip
- Integrated countdown timer with notification + haptics
- ElevenLabs voice narration (TTS)
- Swipe between steps · share dish at the end
- Star rating + community review submission
- Built-in screenshot card for social sharing

Marketing angles

- This is the **#1 screen to film**. Show a user cooking *without ever touching the screen* — the voice does the work.
- Hook: *"It's like having a chef whispering in your ear."*
- Compare-to-YouTube angle: no scrubbing, no ads, no missing the next step.
- App Store screenshot #2 candidate — pair with caption "Guided. Voiced. Timed."
- TikTok demo: split-screen kitchen view + phone view, watch a beginner cook a 40g-protein dish.

SCREEN 09

Feedback Screen

Post-cook 5-question feedback loop

Purpose

After a successful cook, users land here. Five quick questions: Did it turn out? Was any step confusing? Was timing accurate? Would you cook this again? Did SpiceStrong make cooking easier? Compiles answers into an SMS or in-app review — Venky reads every one personally.

Key elements

- 5 quick-tap questions
- Star rating (1–5)
- Optional comments field
- SMS sender pre-populated

Marketing angles

- Trust-building content: *"Every cook review goes straight to the founder."*
- Use real feedback (with permission) as testimonial graphics.
- Angle for /r/IndianFood, /r/MealPrepSunday: "Reviewed by 1,000+ home cooks."

AI RECIPE CREATION

SCREEN 10

AI Recipe Builder (SpiceBuilder) Screen

Claude-powered recipe generator — the differentiator

Purpose

Users describe what they want ("chicken curry, 40g protein, 25 minutes, mild") and Claude generates a full recipe — ingredients, steps, chef tip, macros — within seconds. DALL-E 3 then generates a dish hero image, ingredient images, and step-by-step photos in the background. The recipe is automatically saved and integrated into the user's recipe list.

Key elements

- Free-text prompt input
- Pre-set parameters: protein, meat cut, cuisine, difficulty, calories
- Live progress: 'Analyzing macros' → 'Building recipe' → 'Generating images'
- Free tier: up to 30 AI recipes total · Pro: unlimited

Marketing angles

- Strongest **differentiator** vs. every other recipe app. Hook: "*Type your craving — we cook the recipe.*"
- Reel formula: 3-second prompt typing → 3-second loading montage → 3-second finished dish.
- Tie to AI trend cycle — this is genuinely novel to most users.
- App Store screenshot #3 candidate.
- PR angle: "A solo founder built a Claude-powered chef in his kitchen in Bellevue."

SCREEN 11

AI Recipe Result Screen

Where AI recipes feel like magazine spreads

Purpose

Displays the finished AI recipe with a magazine-quality hero, ingredient images, and per-step photos (all DALL-E 3 generated). Polls in the background every 30 seconds to hydrate images as they arrive. Users can tap Start Cooking and the recipe runs through the standard Cooking Mode flow — no difference from a pre-built recipe.

Key elements

- AI-generated hero image
- Per-ingredient AI photos
- Per-step AI photos
- Polished macro card
- Start Cooking CTA

Marketing angles

- Carousel angle: "The prompt → the recipe → the photos." 3 slides.
- Demonstrates polish — AI doesn't mean ugly; the output looks editorial.

SCREEN 12

Add Recipe Screen

5-step wizard for cooks who want to upload their own

Purpose

Power-user feature: a guided wizard to add a user's own recipe. Steps: **Import** (photo or paste — AI can extract text), **Basics**, **Ingredients**, **Cooking Steps** (with voice input via expo speech), **Hero Image**, **Review & Submit**. Auto-computes nutrition. Submits for moderator review.

Key elements

- 6-step progress bar
- Voice input on step descriptions
- Auto nutrition analysis via Edamam/Claude
- Photo upload for hero + each step
- Submit-for-review pipeline

Marketing angles

- Community angle: "Got a family recipe? SpiceStrong will photograph it."
- User-generated content is gold — invite food creators to upload one signature dish.
- Newsletter campaign: "Featured Home Cook of the Month."

SCREEN 13

Custom Recipe Screen

Quick manual recipe entry

Purpose

Lightweight alternative to the wizard — for users who just want to type a recipe in 60 seconds. Name, ingredients (per tier), steps, chef tip, save. Stays local on device.

Key elements

- Name + tier selector
- Add ingredient / step rows
- Chef tip field
- Save to library

Marketing angles

→ Niche but useful: power-user content angle — "Save your mom's recipe so you never lose it."

SCAN & AI VISION

SCREEN 14

Scan My Grocery (Fridge) Screen

Photograph your fridge → get recipe ideas

Purpose

Users take up to 4 photos of their fridge/pantry/grocery haul. Claude vision identifies every ingredient, categorizes it (protein, vegetable, dairy, spice, etc.), and lets the user review and edit. The list then powers recipe matching.

Key elements

- Up to 4 photos
- AI loading state: 'Identifying ingredients...'
- Categorized review screen with emoji
- Edit / add / remove items
- Continue → recipe matches

Marketing angles

- **Highest-virality screen.** Hook: "Open your fridge → get dinner."
- Reel formula: open fridge → 4 photo taps → cut to a finished plate.
- Try the "fridge challenge" — creators show their messy fridges, the app responds.
- App Store screenshot #4 candidate.

SCREEN 15

Fridge Recipe Results Screen

Matched recipes tiered by readiness

Purpose

After scanning the fridge, this screen shows recipe matches in three tiers: **Ready to Cook** (90%+ ingredient match, green ■), **Almost There** (60–89%, orange ■), and **Worth a Trip** (30–59%, cart icon). If fewer than 3 good matches, an AI Chef card offers to invent something with what you have.

Key elements

- Tier 1: Ready to Cook (green)
- Tier 2: Almost There (yellow)
- Tier 3: Worth a Trip
- Fallback: AI Chef "invent something" card

Marketing angles

- Closes the loop on the fridge demo — show the green ■ tier as the payoff frame.
- Hook: "You already have 90% of dinner."

SCREEN 16

Scan Nutrition Label Screen

Health score in seconds for any packaged food

Purpose

Camera-based nutrition label scanner. Reads the panel, computes a **health score 0–100**, flags protein density (6.4 g protein per 100 cal benchmark), shows % of the user's daily macro targets, warns on additives and processing level, and writes a Claude-powered health summary personalized to the user's fitness goals.

Key elements

- Live camera + still-photo fallback
- Health score badge (green/yellow/red)
- Protein density check
- Dietary flag warnings (your allergens, your goal)
- % of daily fitness targets
- Additive warnings (Red 40, Sodium Benzoate, etc.)
- AI summary tailored to user

Marketing angles

- **Standalone hero feature** — could be its own TikTok account.
- Hook: "Is that bar actually healthy? Scan it."
- Content series: "I scanned 20 supermarket protein bars. Here's the winner."
- Counter-angle: scan a marketed-as-healthy item that scores red — provocative content.

SCREEN 17

Scan Restaurant Menu Screen

Eating out without breaking your goals

Purpose

Photo a restaurant menu, Claude identifies dishes, estimates macros for each, color-codes them (green = excellent, yellow = moderate, red = avoid), flags dietary issues, and surfaces a single **Best Choice for Your Goals** recommendation.

Key elements

- Photo + restaurant name capture
- Per-dish: name, description, est. calories/protein/carbs/fat
- Color rating: excellent · good · poor · avoid
- Top recommendation badge

Marketing angles

- Lifestyle angle: "*Cheat day? Or not? Scan first.*"
- Travel content: "*Hit any restaurant on the road and still hit 1g/lb protein.*"
- Influencer collab — film a creator scanning a menu before ordering.

MEAL PLANNING

SCREEN 18

Meal Plan (Calendar) Screen

Day-by-day plan with hero-image meal cards

Purpose

A day navigator (← Month Day, Year →) with a daily macro summary bar (calories, protein, carbs, fat) and a hero-image recipe card per slot: **Breakfast, Lunch / Dinner, Snack / Dessert**. Users can add planned meals from any recipe, override macros from a photo (Edamam vision), and track adherence.

Key elements

- Day navigator with macro totals
- Hero image meal cards per slot
- Add from recipe library
- Manual entry with photo ("Chipotle Bowl" + photo → AI macros)

Marketing angles

- Carousel post: 7 days of meals = 1 week of content.
- Angle: "Every Sunday in 4 minutes" — meal-prep crowd.

SCREEN 19

Auto Meal Plan Screen

7-day plan generated to your macros

Purpose

A wizard that asks the user for their daily calorie & protein targets and which meal slots to fill (breakfast 25% / lunch 30% / dinner 30% / snack 15%), then generates a full 7-day plan tailored to their goals. Progress screen during generation; post-generation it lands the user on the Meal Plan calendar.

Key elements

- Step 1: Targets (calories, protein)
- Step 2: Slots to fill
- Step 3: Generating progress
- Step 4: Done → Meal Plan

Marketing angles

- Hook: "7 days of high-protein meals in 30 seconds."
- Best paired with the Pro upsell — call out the time saved.

PANTRY & SHOPPING

SCREEN 20

My Pantry Screen

Inventory the kitchen

Purpose

Premium pantry inventory: items grouped by category (Proteins, Veggies, Fruits, Dairy, Grains, Condiments, Spices, Pantry) with counts, editable quantities, swipe/tap to move items to grocery list, edit, or delete. Quick-add + Scan My Grocery CTA.

Key elements

- Category cards with counts
- Inline quantity editing
- Move to Grocery / Edit / Delete
- Scan My Grocery shortcut

Marketing angles

- Audience angle: "home cooks who hate food waste."
- Cross-promote with Scan Grocery — the two together is the magic combo.

SCREEN 21

Grocery List Screen

The shopping list that auto-builds from recipes

Purpose

Categorized shopping list with checkboxes (tap = bought), auto-subtraction of pantry items, share via system share sheet, move bought items back to pantry, and a smart AI-written summary of what's on the list.

Key elements

- Checkbox items by category
- Pantry-aware: bought items auto-flow to pantry
- Share list via SMS / email / Notes
- AI smart summary

Marketing angles

- Show alongside the cooking flow — a complete "weekly cycle" demo.
- Hook: "From your fridge scan to your shopping list — automatically."

SCREEN 22

Order Groceries Screen

Coming soon — direct ordering

Purpose

Roadmap placeholder advertising upcoming integrations with **Amazon Fresh, Instacart, Walmart**. Users see service cards with "Coming Soon" badges and can opt in for notifications when ordering goes live in their area.

Key elements

- Amazon Fresh · Instacart · Walmart service cards
- Coming Soon badges
- Notify-me opt-in

Marketing angles

- Tease the roadmap — "What we're building next" content.
- Useful for waitlist building if marketer wants to capture emails.

FITNESS & PROFILE

SCREEN 23

Fitness Profile Screen

The macro calculator that personalizes everything

Purpose

Step-by-step intake to compute daily calorie and macro targets: **Goal** → **Gender** → **Age** → **Height** → **Weight** → **Target Weight** → **Body Fat** → **Activity Level** → **Results**. Results screen shows daily calorie target, protein g/day, and saves to the user's profile — every other screen (recipe filter, nutrition scan, meal plan) reads from this.

Key elements

- 9-step onboarding flow
- Photo upload (optional) for body fat estimate
- Goal labels: Fat Loss / Muscle Gain / Maintain / Recomp
- Activity levels with descriptions
- Animated results screen

Marketing angles

- Hook: "Tell us your goal. We'll plate the macros."
- Solid **screenshot for fitness creators** — the calculator is the most familiar pattern.
- Cross-niche: macro-counting audience, especially MyFitnessPal switchers.

SCREEN 24

Progress Report Screen

Weekly / monthly side-by-side with before/after photos

Purpose

Tracks progress over time. Toggle **Weekly / Monthly** view. Side-by-side comparison of current vs. previous period averages (calories, protein, carbs, fat, protein goal hits). Body stats trend (weight, body fat). Before/After photo grid. AI-written weekly summary.

Key elements

- Weekly / Monthly toggle
- Side-by-side macro deltas
- Body stats history
- Before/After photo grid
- AI weekly summary

Marketing angles

- Strongest **retention story**: *"This is what 4 weeks looks like."*
- Long-form content angle: case studies with users.
- Pro feature — call out in upsell content.

SCREEN 25

Dietary Restrictions Screen

One toggle changes every recipe shown

Purpose

Profile settings for global filters. **Diet Tags**: High Protein, Low Fat, Low Carb, Keto, Low Calorie, Low Sodium, Low Sugar, High Fiber. **Allergen / Lifestyle**: Vegetarian, Vegan, Gluten Free, Dairy Free, Egg Free, Nut Free, Soy Free, Shellfish Free, Paleo, Whole30. Saves to Supabase and is enforced globally — every recipe list, every scan result, every meal plan respects this.

Key elements

- 8 dietary tag chips with thresholds (e.g., 'High protein = $\geq 30\text{g}$ ')
- 10 allergen/lifestyle chips
- Auto-hides irrelevant tags based on user's veg/non-veg preference

Marketing angles

- Inclusivity content: *"Vegan, keto, gluten-free — all in one app."*
- Reels demo: toggle vegan on → entire app re-filters live.

NAVIGATION

SCREEN 26

Profile Drawer (Slide-out Menu)

The 'everything' menu

Purpose

Tapping the profile icon (top-right of Protein Selection) slides out a left-side drawer with every feature in one place. Order: **Fitness Profile, Progress Report, Dietary Restrictions, SpiceBuilder Recipe, Add Your Recipe, Auto Meal Plan, Meal Calendar, Scan Nutrition Label, Scan Restaurant Menu, My Pantry Items, My Shopping List, Upgrade to Pro, Restore Purchase.**

Key elements

- 13 menu items with icons
- Upgrade to Pro CTA near the bottom
- Restore Purchase for App Store users

Marketing angles

- Single screenshot that shows the **full feature surface** — useful as an App Store screenshot caption: "All these tools. One app."
- Reference image when training the marketer on what the app actually contains.

Marketer Quick-Start Checklist

If your social media marketer has just one week to ramp up, here is a sequenced plan. Each item below maps to specific screens in this guide.

Week 1, Day 1–2	Read this guide cover-to-cover. Download SpiceStrong from the App Store and run through Splash → Protein → Recipe List → Cooking Mode at least three times with different proteins.
Week 1, Day 3	Capture clean phone-frame screenshots of: Splash, Protein Selection, Recipe List, Cooking Mode (mid-step), AI Recipe Builder, Scan My Grocery results, Fitness Profile results. Save in 1080×1920 (Reels/Stories) and 1242×2688 (App Store).
Week 1, Day 4	Film three 15-second Reels: (1) Fridge scan → dish, (2) AI prompt → recipe, (3) Voice-guided cooking. Use the hooks suggested under each screen's Marketing Angles.
Week 1, Day 5	Write five post captions using the headline hooks pre-written in this guide (look for italicized lines in Marketing Angles). Schedule across Instagram, TikTok, and a Reddit cross-post to /r/MealPrepSunday or /r/highprotein.
Ongoing weekly	Pick one screen per week and build a content theme around it. Run the Scan Nutrition Label angle as a recurring series ('I scanned 10 X — here's the winner').
Always-on	Re-read the Brand Voice row in the cover summary before writing copy. SpiceStrong is editorial, premium, chef-meets-coach. Avoid 'broetic' fitness language.

Questions or clarifications? Loop in Venky (vgowda@gmail.com). Cook one recipe a week — the best marketers for SpiceStrong are also its best users.
